PREFACE

This report presents the results of a detailed Air Force Occupational Survey of the Radio Communications Systems career ladder, Air Force Specialty Code (AFSC) 3C1X1 (formerly AFSC 492X1). Authority for conducting occupational surveys is contained in AFI 36-2623. Computer products used in this report are available for use by operations and training officials.

The survey instrument was developed by Mr. Donald Cochran, Inventory Development Specialist, with computer programming support furnished by Mrs. Jeannie C. Guesman. Mr. Richard G. Ramos provided administrative support. Second Lieutenant Martin K. Topping, Occupational Analyst, analyzed the data and wrote the final report. This report has been reviewed and approved by Mr. James B. Keeth, Chief, Airman Analysis Section, Air Force Occupational Measurement Squadron (AFOMS).

Copies of this report are distributed to Air Staff sections, major commands, and other interested training and management personnel. Additional copies are available upon request to AFOMS, Attention: Chief, Occupational Analysis Flight (OMY), 1550 5th Street East, Randolph Air Force Base, Texas 78150-4449 (DSN 487-6623).

SUMMARY OF RESULTS

1. Survey Coverage: The Radio Communications Systems career ladder was surveyed to provide current job and task data for use in updating career ladder documents and training programs. Survey results are based on responses from 917 respondents, accounting for 67 percent of the total assigned population. All major using commands are well represented in the survey sample.
2. Career Ladder Structure: Structure analysis identified two job clusters and seven independent jobs: Analyst Job Cluster, Collection Manager Job, Supervisor Job Cluster, Technical Training Instructor Job, Facility Exploitation Manager (FEM) Job, Digital Intelligence Specialist Job, Reference/Intelligence Librarian Job, Superintendent Job, and Manager Job.
3. Career Ladder Progression: Distinctions between skill-level groups are evident, with personnel at the 3- and 5-skill levels spending the vast majority of their job time performing technical tasks across a number of different jobs. Seven- and 9-skill levels are characterized by a shift from technical tasks to managerial and supervisory tasks.
4. AFMAN 36-2108 Specialty Description: The description accurately describes the technical and supervisory aspects of jobs at the various levels, but it fails to address telephone switchboard-oriented tasks.
5. Training Analysis: Overall, the AFSC 3C1X1 Specialty Training Standard, dated April 1994, was generally supported by the Occupational Survey Report data. The Plan of Instruction for the E3ABR3C131 course was also generally supported. Subject-matter experts, however, should closely review both documents for possible fine-tuning of content and proficiency codes.
6. Job Satisfaction Analysis: Overall job satisfaction was low across the entire career ladder, even at the senior levels. When compared to 1988 survey data, job satisfaction levels have dropped, especially for first-enlistment personnel. Less than half the personnel in many jobs found their work interesting or were satisfied with the sense of accomplishment gained from their work.
7. Implications: Survey results indicate the 3C1X1 career ladder structure is extremely diverse. In addition, personnel in many of the jobs did not find their jobs interesting. However, despite the diversity of work being performed, job progression shows a distinct pattern as one moves from the 3-skill to the 9-skill level. The AFMAN 36-2108 *Specialty Description* and the career ladder training documents, while generally supported by survey data, need to be reviewed.

**OCCUPATIONAL SURVEY REPORT (OSR)
RADIO COMMUNICATIONS SYSTEMS CAREER LADDER
(AFSC 3C1X1)**

INTRODUCTION

This is a report of an occupational survey of the Radio Communications Systems career ladder completed by the Air Force Occupational Measurement Squadron (AFOMS). The survey was conducted as part of a 5-year production cycle. Data collected will be used to validate career ladder documents and training programs. This is the first survey of this AFSC since the renumbering of the career ladder from AFSC 492X1 to AFSC 3C1X1. The last occupational survey for this career ladder was published in November 1988.

Background

As described in the AFMAN 36-2108 *Specialty Description*, dated 31 October 1994, Radio Communications Systems members operate transmitting, receiving, and ancillary communications equipment in fixed and tactical environments. They operate radio and satellite communications systems and computer terminals. This includes tuning transmitters to proper frequencies and adjusting communications systems equipment, antenna systems, and teletype equipment to provide voice, digital, or analog operations. They perform equipment checks and minor maintenance as well as monitoring, analyzing, and translating transmissions.

AFSC 3C1X1 airmen are also responsible for processing communications traffic. They copy transmissions from air and ground stations. They process and relay operational, administrative, and morale messages. They also encode and decode classified messages and receive emergency and distress signals. AFSC 3C1X1 airmen maintain codes, authentication systems, communications directives, publications, and frequency propagation data. They also account for classified or controlled documents, equipment, and communications security materials.

In addition, these airmen review and evaluate radio operations. They identify and resolve operational problems. They also inspect radio operations activities and discuss corrective action with operations personnel. Finally, they are responsible for monitoring station management, training programs, and mission support.

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

Entry into the career ladder currently requires an Armed Services Vocational Aptitude Battery administrative score of 45. The technical school for this career ladder is located at Keesler AFB in Biloxi, MS. Airmen entering this career ladder must first complete the 8-week Radio Communications Systems Apprentice course covering keyboarding, career progression, ground radio equipment, communications agencies, point-to-point operations, and Quality Air Force awareness. There is also a 7-skill level Radio Communications Systems Craftsman course.

SURVEY METHODOLOGY

Inventory Development

The data collection instrument for this occupational survey was USAF Job Inventory (JI) Air Force Personnel Test (AFPT) 90-3C1-023, dated November 1994. A tentative task list was prepared after reviewing pertinent career ladder publications and directives, pertinent tasks from the previous survey instrument, and data from the last OSR. The preliminary task list was refined and validated through personal interviews with 64 subject-matter experts (SMEs) at the technical training location and at the following installations:

BASE	REASON FOR VISIT
Keesler AFB MS	Resident technical training location
Hurlburt Field FL	Special Operations Communications Flight (SOCF), highly mobile communications unit
Robins AFB GA	Transportable Communications Central, mobile combat communications unit
Elkhorn NE	Det. 2, 55 Global Communications Systems Squadron, some unique equipment
Offutt AFB NE	Air Force Satellite Communications (AFSATCOM), Giant Star operations, Secure Communications Operations (SCO), wide variety of duties performed
Andrews AFB MD	Mystic Star radio operators, Information and Telecommunications System for the American Air Forces (SITFAA), Military Affiliate Radio System (MARS)
Brandywine MD	Det. 2, 89 Communications Group, AFSATCOM

The resulting JI contains a comprehensive listing of 547 tasks grouped under 14 duty headings and a background section requesting such information as grade, duty title, organizational level, fixed communications systems used, deployable communications systems used, frequency bands used, equipment operated, and types of forms used.

Survey Administration

From March through June 1995, Survey Control Monitors at base training offices worldwide administered the inventory to eligible 3-, 5-, 7-, and 9-skill level DAFSC 3C1X1 personnel. Members eligible for the survey consisted of the total assigned population of the career ladder, excluding the following: (1) hospitalized personnel; (2) personnel in transition for a permanent change of station; (3) personnel retiring within the time the inventories were administered to the field; and (4) personnel in the job less than 6 weeks. Job incumbents were selected from a computer-generated mailing list obtained from personnel data tapes maintained by the Air Force Personnel Center, Randolph AFB TX.

Each individual who completed the inventory first completed an identification and biographical information section and then checked each task performed in his or her current job. After checking all tasks performed, each member then rated each of these tasks on a 9-point scale, showing relative time spent on that task, as compared to all other tasks checked. The ratings ranged from 1 (very small amount time spent) through 5 (about average time spent) to 9 (very large amount time spent).

To determine relative time spent for each task checked by a respondent, all of the incumbent's ratings are assumed to account for 100 percent of his or her time spent on the job and are summed. Each task rating is then divided by the total task ratings and multiplied by 100 to provide a relative percentage of time spent for each task. This procedure provides a basis for comparing tasks in terms of both percent members performing and average percent time spent.

Survey Sample

Personnel were selected to participate in this survey so as to ensure an accurate representation across major commands (MAJCOM) and military paygrade groups. Table 1 reflects the percentage distribution, by MAJCOM, of assigned AFSC 3C1X1 personnel as of March 1995. The 917 respondents in the final sample represent 67 percent of the total assigned personnel and 74 percent of the total personnel surveyed. Table 2 reflects the paygrade distribution for these personnel. The survey sample is considered to be a satisfactory representation of the career ladder population.

Task Factor Administration

Job descriptions alone do not provide sufficient data for making decisions about career ladder documents or training programs. Task factor information is needed for a complete analysis of the career ladder. To obtain the needed task factor data, selected senior AFSC 3C1X1 personnel (generally E-6 or E-7 craftsmen) also completed a second booklet for either training emphasis (TE) or task difficulty (TD). These booklets were processed separately from the JIs. This information is used in a number of different analyses discussed in more detail within the report.

Training Emphasis (TE). TE is a rating of the amount of emphasis that should be placed on tasks in entry-level training. The 41 senior NCOs who completed a TE booklet were asked to select tasks they felt require some sort of structured training for entry-level personnel, and then indicate how much training emphasis these tasks should receive, from 1 (extremely low emphasis) to 9 (extremely high emphasis). Structured training is defined as training provided at resident technical schools, field training detachments, mobile training teams, formal on-the-job training (OJT), or any other organized training method. There was acceptable agreement among the 41 raters. The average TE rating was 2.39, with a standard deviation of 1.44. Any task with a TE rating of 3.83 or above is considered to have high TE.

Task Difficulty (TD). TD is an estimate of the amount of time needed to learn how to do each task satisfactorily. The 43 senior NCOs who completed TD booklets were asked to rate the difficulty of each task using a 9-point scale (extremely low to extremely high). Interrater reliability for these raters was also acceptable. Ratings were standardized so tasks have an average difficulty of 5.00, with a standard deviation of 1.00. Any task with a TD rating of 6.00 or above is considered to be difficult to learn.

When used in conjunction with the primary criterion of percent members performing, TE and TD ratings can provide insight into first-enlistment personnel training requirements. Such insights may suggest a need for lengthening or shortening portions of instruction supporting entry-level jobs.

SPECIALTY JOBS (Career Ladder Structure)

A USAF Occupational Analysis begins with an examination of the career ladder structure. The structure of jobs within the Radio Communications Systems career ladder was examined on the basis of similarity of tasks performed and the percent of time spent ratings provided by job incumbents, independent of other specialty background factors.

Each individual in the sample performs a set of tasks called a *job*. For the purpose of organizing individual jobs into similar units of work, an automated job clustering program is used. This hierarchical grouping program is a basic part of the Comprehensive Occupational Data Analysis Program system for job analysis. Each individual job description (all the tasks performed by that individual and the relative amount of time spent on those tasks) in the sample is compared to every other job description in terms of tasks performed and the relative amount of time spent on each task in the JI. The automated system is designed to locate the two job descriptions with the most similar tasks and percent time ratings and combine them to form a composite job description. In successive stages, new members are added to initial groups, or new groups are formed based on the similarity of tasks performed and similar time ratings in the individual job descriptions.

Overview of Specialty Jobs

The analysis procedure described above identified 14 jobs within the survey sample. The division of jobs performed by AFSC 3C1X1 personnel is illustrated in Figure 1, and a listing of those jobs is provided below. The group (GP) or stage (ST) number shown beside each title is a reference to computer-printed information; the number of personnel in each group or stage (N) is also shown.

- I. MILSTAR TERMINAL OPERATOR (GP0039, N=16)
- II. TRAINING (ST0090, N=15)
- III. SECURITY MANAGEMENT (ST0147, N=15)
- IV. MAJCOM STAFF NCO (ST0128, N=14)
- V. SUPERVISOR (ST0054, N=117)
- VI. COMBAT CREW COMMUNICATIONS RADIO OPERATOR (ST0135, N=62)
- VII. REGENCY NET RADIO OPERATOR (ST0124, N=7)
- VIII. GLOBAL HF SYSTEMS RADIO OPERATOR (ST0073, N=236)
- IX. AFSATCOM TERMINAL OPERATOR (ST0095, N=66)
- X. SPECIAL OPERATIONS SQUADRON RADIO OPERATOR (ST0100, N=9)
- XI. MOBILITY/TACTICAL RADIO OPERATOR (ST0080, N=140)
- XII. MARS RADIO OPERATOR (ST0070, N=31)

AFSC 3C1X1 CAREER LADDER JOBS

FIGURE 1

XIII. COMMAND, CONTROL, COMMUNICATIONS RADIO OPERATOR (ST0145, N=5)

XIV. TELEPHONE SWITCHBOARD OPERATOR (ST0052, N=49)

The respondents forming these jobs account for 85 percent of the survey sample. The remaining 15 percent were performing tasks or series of tasks which did not group with any of the defined jobs. Job titles given by respondents which were representative of these personnel include War Planner, Quality Advisor, Network Technician, and Deployment Planner.

Group Descriptions

The following paragraphs contain brief descriptions of the jobs identified through the career ladder structure analysis. Table 3 presents the relative time spent on duties by members of these specialty jobs. Selected background data for these jobs are provided in Table 4. Representative tasks for all the jobs are contained in Appendix A.

I. MILSTAR TERMINAL OPERATOR (GP0039). These 16 airmen make up only 2 percent of the survey sample. They are all assigned to AFSPACECOM and perform tasks related to Milstar networks. High percentages of their time are spent performing AFSATCOM activities (see Table 3, Duty L) and general administrative tasks (see Table 3, Duty E). Typical tasks performed include:

- inventory classified materials
- log on or log off Milstar networks or satellites
- set up or tear down Milstar networks
- set up or tear down Milstar point-to-point calls
- destroy classified materials
- document destruction of classified materials
- configure Milstar terminals as monitor net controller
- load time standard modules
- configure Milstar terminals as net control elements (NCEs)
- enter date into time distribution subsystems (TDSs)

The majority of these airmen (63 percent) hold a 5-skill level DAFSC, while 31 percent have a 7-skill level DAFSC. The average time in the career field is 10 years. Very few of these personnel are in their first enlistment (6 percent). The paygrades range from E-2 to E-6, with E-4, E-5, and E-6 being the predominant paygrades. All of these members are assigned to units within the United States.

AVERAGE NUMBER OF TASKS PERFORMED	134	41	19	40

II. TRAINING (ST0090). Comprising 2 percent of the survey sample, these 15 airmen are responsible for preparing and conducting training. Six of the 15 members in this job are stationed at Keesler AFB and serve as instructors in the formal tech training school. The rest come from a variety of bases and are involved primarily with localized training, such as OJT. Distinctive tasks performed include:

- construct or develop training materials or aids
- evaluate training methods or techniques
- evaluate effectiveness of training programs
- brief organizational personnel on training programs or matters
- conduct training conferences, briefings, or debriefings
- establish or maintain study reference files
- maintain training records, charts, graphs, or files
- develop or prepare lesson plans
- evaluate personnel for training needs
- implement training programs

Sixty percent of these members hold a 7-skill level DAFSC. Consequently, average time in the career field is fairly high at 12 years, 6 months. The predominant paygrades are E-5 and E-6. Forty percent of these 15 airmen are in AETC, while the rest are divided among AMC, ACC, and PACAF.

III. SECURITY MANAGEMENT (ST0147). The 15 members (2 percent of the survey sample) forming this job are differentiated because of their performance of tasks pertaining to security-related items. Such items include access lists, safes, locks, and classified materials. Security Manager and Communications Security (COMSEC) Responsible Officer was a typical job title reported by the members. Commonly performed tasks include:

- destroy classified materials
- document destruction of classified materials
- maintain classified materials
- maintain security forms for safes, containers, or rooms
- maintain accountability records for classified materials or documents
- establish access lists
- change safe or lock combinations
- inventory classified materials
- update access lists
- verify accuracy of access lists

- establish organizational policies, such as operating instructions (OIs) or standard operating procedures (SOPs)
- transport classified materials
- compile information for records, reports, or logs
- establish accountability records for classified materials or documents

Sixty-seven percent of the members of this job hold a 5-skill level DAFSC, while 27 percent hold a 7-skill level. Predominant paygrades are E-4, E-5, and E-6. Only 7 percent are in their first enlistment. Average time in service is almost 10 years.

IV. MAJCOM STAFF NCO (ST0128). This job, comprised of 14 members, makes up 2 percent of the survey sample. These members perform tasks that are typically managerial and administrative in nature. Forty percent of their time is spent performing general administrative and supply activities, while 29 percent is spent organizing and planning. Only 5 percent of their time is spent on technical tasks (see Table 3). Superintendents, managers, and planners are typical job titles reported by group members. Typical tasks which characterize this job include:

- participate in general meetings, such as staff meetings, briefings, conferences, and workshops, other than conducting
- draft or write classified reports, messages, or documents
- review drafts of regulations, manuals, or other directives
- destroy classified materials
- maintain classified materials
- plan communications support for exercises or special missions
- plan or prepare briefings
- change safe or lock combinations
- draft requests for TDY orders, passports, or visas
- initiate electronic mail (E-mail)
- determine or establish logistics requirements, such as personnel, equipment, space, tools, or supplies
- evaluate communications operations

Members of this group are largely senior in grade, with 71 percent holding a 7-skill level, and 7 percent holding a 9-skill level. Although the paygrades range from E-5 to E-8, 50 percent of the group are in paygrade E-7. Average time in the career field is almost 16 years and average time in service is over 17 years. None of these airmen are in their first enlistment.

V. SUPERVISOR (ST0054). The 117 members of this job make up 13 percent of the survey sample, the third largest specialty job. Like the MAJCOM Staff NCO group, members perform higher-level administrative and managerial duties, but they differ in that they are responsible for the day-to-day supervising of lower-grade airmen. Consequently, they spend 17 percent of their relative time on technical tasks, as opposed to the 5 percent spent by members of the MAJCOM staff NCO job. Also, members of the job reported performing a high average number of tasks (109), the second highest of all jobs identified. Typical tasks include:

- participate in general meetings, such as staff meetings,
- briefings, conferences, and workshops, other than conducting
- counsel personnel on personal or military-related matters
- determine or establish work priorities
- write EPRs
- establish performance standards for subordinates
- conduct performance feedback worksheet (PFW) evaluation
- sessions
- evaluate personnel for compliance with performance standards
- write recommendations for awards or decorations
- plan or prepare briefings
- plan or schedule work assignments or priorities
- evaluate personnel for promotion, demotion, reclassification, or
- special awards
- establish work methods or procedures
- establish organizational policies, such as operating instructions
- (OIs) or standard operating procedures (SOPs)
- conduct supervisory orientations of newly assigned personnel

This specialty job is also composed primarily of upper-level personnel, with 59 percent holding a 7-skill level. The predominant paygrades are E-5, E-6, and E-7. Average time in the career field is over 13 years, and average time in service is almost 15 years. Eighty-seven percent supervise other airmen.

VI. COMBAT CREW COMMUNICATIONS RADIO OPERATOR (ST0135). The 62 members of this group, making up 7 percent of the survey sample, are responsible for performing Combat Crew Communications activities, such as training air and missile crews on radio procedures and constructing communications kits for air and missile crews. Fifty-three percent of their time is spent on such tasks (see Table 3, Duty K). Common tasks for this job include:

- issue communication kits
- breakdown communication kits
- inventory COMSEC materials
- issue FLIPs
- assemble flight information publication (FLIP) bags
- assemble peacetime communication kits
- update FLIPs
- assemble special mission kits
- retrieve communication kits
- retrieve FLIPs
- destroy classified materials
- file communications kit materials
- review flying schedules
- brief aircrews on peacetime communications procedures
- inventory classified materials

Eighty-one percent of the members of this job hold a 5-skill level. The most predominant paygrade is E-4. Fifty-two percent of the group are in ACC.

VII. REGENCY NET RADIO OPERATOR (ST0124). This small group of radio operators has 7 members and makes up 1 percent of the survey sample. They perform many of the same tasks as other radio operators, but they are distinguished by their utilization of Regency Net systems, which are being employed at overseas locations. Some of their most commonly performed tasks include:

- destroy classified materials
- document destruction of classified materials
- inventory classified materials
- maintain master station logs
- verify keying of cryptological equipment
- conduct phone patches manually
- identify and report equipment or supply problems
- inventory equipment, tools, or supplies
- receive, transmit, or relay emergency action messages (EAMs)
- supervise Radio Communications Systems Journeymen (AFSC 3C151)
- conduct performance feedback worksheet (PFW) evaluation sessions

Most of these members are located overseas, with only 14 percent of the group stationed within the United States. Every member of the group is at a 5-skill level. Most of the airmen in this job are in paygrade E-5. Fifty-seven percent of the members are in USAFE, and 57 percent of the group supervise other airmen.

VIII. GLOBAL HF SYSTEMS RADIO OPERATOR (ST0073). The 236 members in this job make up 26 percent of the survey sample, making this the largest specialty job identified, and forming the core job area of the career field. Members work primarily with the Global HF system, which is in widespread use both in CONUS and overseas. They are responsible for sending, receiving, and relaying point-to-point messages, and transmitting high-precedence broadcasts. They perform a wide variety of tasks including:

- perform radio checks
- destroy classified materials
- receive, transmit, or relay emergency action messages (EAMs)
- authenticate message traffic using transmission authentication systems
- perform time hacks
- receive, transmit, or relay foxtrot broadcasts
- authenticate stations using challenge-and-reply systems
- set station clocks
- inventory classified materials
- rotate antennas using radio dial codes
- document destruction of classified materials

Within this specialty job, 72 percent of the members maintain a 5-skill level DAFSC and on the average are in paygrades E-3 or E-4. Less than half (47 percent) of the group is assigned within the CONUS. The members are spread out across numerous MAJCOMs, including PACAF, USAFE, ACC, AFMC, and AMC.

Although the majority of members in this job utilize the Global HF system, a small group of 16 airmen reported working with the Mystic Star system. Also called Presidential Radio Operators, this small group of airmen are stationed at Andrews AFB MD. They provide secure voice and teletype communications to special mission aircraft, such as Air Force One and the National Emergency Airborne Command Post.

IX. AFSATCOM TERMINAL OPERATOR (ST0095). This group of 66 airmen make up 7 percent of the survey sample. They are considered radio operators like the last two groups, but they distinguish themselves from the others by their performance of SATCOM duties. Twenty-three percent of their time is directed towards SATCOM duties. Some of the tasks typical to this group are:

- destroy classified materials
- inventory classified materials
- configure consoles or terminals for secure or nonsecure voice or data communications
- operate status display units (SDUs)
- reset EAM alarms
- configure SATCOM systems for time division multiplex (TDM) mode I operations
- initiate or terminate satellite commands
- receive, transmit, or relay emergency action messages (EAMs)
- enter SATCOM messages into storage
- load SATCOM command post synchronizers
- maintain master station logs
- configure SATCOM systems for random operations
- transmit SATCOM messages

The members of this specialty job are predominantly in paygrades E-4 and E-5, and 76 percent of them are at a 5-skill level. They have an average 93 months in service, and 52 percent of the group supervise other airmen.

X. SPECIAL OPERATIONS SQUADRON RADIO OPERATOR (ST0100). This small group of 9 radio operators makes up 1 percent of the total survey sample. They spend much of their time setting up and operating radio equipment, as well as performing general administrative and supply activities. Members of this group describe themselves using one of two job titles: Special Operations Squadron Radio Operator or Operations Center Command Controller. Tasks common to this group include:

- destroy classified materials
- perform radio checks
- inventory classified materials
- receive and relay aircraft emergencies
- receive, transmit, or relay facsimile messages
- document destruction of classified materials
- maintain classified materials
- maintain master station logs
- connect or disconnect antennas to radio equipment
- key secure cryptographic systems
- receive and relay departure reports

- compile information for records, reports, or logs
- load or unload radio equipment
- configure transceivers for secure voice operations

This group of predominantly E-4 personnel is primarily stationed overseas, with only 33 percent in CONUS. Eighty-nine percent of the members have achieved a 5-skill level. No members of the group supervise other airmen.

XI. MOBILITY/TACTICAL RADIO OPERATOR (ST0080). This is the second largest job performed by AFSC 3C1X1 personnel. It consists of 140 airmen, comprising 15 percent of the total population. They perform a wide variety of duties, the most predominant of which is setting up radio equipment, taking up 31 percent of their time. They utilize mobile systems such as mobile SATCOM units and portable transceivers. Some of their typical tasks performed include:

- connect or disconnect antennas to radio equipment
- connect or disconnect antenna couplers
- set up antenna masts
- load or unload radio equipment
- adjust antenna guy lines or ropes
- perform radio checks
- connect or disconnect auxiliary mobile field generators
- orient high frequency (HF) tactical antennas
- set up HF whip antennas
- connect or disconnect cryptographic equipment
- maintain personal mobility bags
- set up HF dipole antennas
- pack or unpack pallets
- perform operational checks of radio systems

Seventy-two percent are at the 5-skill level. The predominant paygrades are E-4 and E-5. A unique characteristic of this group is that they perform an average of 134 tasks, higher than any other job. Seventy-nine percent of the members are stationed in CONUS, and they have an average 106 months in service.

XII. MARS RADIO OPERATOR (ST0070). This job of 31 airmen makes up 3 percent of the survey sample. Their most commonly performed tasks are typical of most radio operators, but they are distinguished by their use of MARS equipment. Some of these tasks include:

- perform radio checks
- check stations into or out of the net
- conduct net roll calls
- maintain master station logs
- conduct phone patches manually
- list traffic with net control stations
- set station clocks
- direct users to tune to your count
- prepare messages using HF voice format
- maintain position logs
- notify stations of frequency changes
- monitor frequency standards of stations on net

The members of this specialty job make up the youngest group of all jobs identified. Seventy-one percent hold a 3-skill level, and the rest are 5-skill levels. Predominant paygrades are E-2 through E-4. Seventy-four percent of the group are in their first enlistment, and average time in the service is not quite 3 years.

XIII. COMMAND, CONTROL, COMMUNICATIONS RADIO OPERATOR (ST0145). These five airmen make up the smallest group in the career ladder. They compose 1 percent of the survey sample. Sixty-six percent of their time is spent setting up radio equipment, a very high percentage when compared to other specialty jobs. Commonly performed tasks include:

- connect or disconnect antennas to radio equipment
- connect or disconnect antenna couplers
- set up antenna masts
- set up HF dipole antennas
- set up HF inverted V antennas
- set up HF long wire antennas, other than sloping long wire
- set up HF sloping V antennas
- destroy classified materials
- maintain position logs
- connect or disconnect auxiliary mobile field generators
- key secure cryptographic systems
- load or unload radio equipment
- set up HF inverted L antennas
- tune transceivers to obtain readable signals

This is also a young group of airmen. Forty percent of the group are at the 3-skill level, while the remainder are at the 5-skill level. E-4 is the predominant paygrade. Forty percent of the specialty job members are in their first enlistment. They perform an average of 19 tasks, the least number of tasks performed when compared to all other groups. Sixty percent of the group are in AFSPACECOM, and the remaining 40 percent are in ACC.

XIV. TELEPHONE SWITCHBOARD OPERATOR (ST0052). This group of 49 airmen makes up 5 percent of the survey sample. They are unique in that they spend 52 percent of their time operating telephone switchboards rather than radio systems. This group also contains four Communications Controllers stationed at Scott AFB whose jobs are very similar to that of a switchboard operator. Some distinguishing tasks of this job are:

- accept and connect calls
- place calls
- set up telephone conference calls
- initiate high-precedence calls
- coordinate switchboard circuit or equipment problems with
maintenance, technical control, or support agencies
- maintain telephone directories
- reroute calls
- maintain switchboard instructions for emergencies, such as fire,
crash, or attack
- monitor high-precedence or emergency calls
- compile telephone directories
- test switchboard circuits
- answer supervisory lights
- supervise minimize condition actions

This job consists of 41 percent 3-skill levels and 51 percent 5-skill levels. The predominant paygrades are E-3, E-4, and E-5. Although they have over 6 years average time in the service, 42 percent are in their first enlistment.

Comparison of Current Jobs to Previous Survey Findings

The results of the specialty job analysis were compared to those of OSR AFPT 90-293-302, Communications Systems Radio Operator (old AFSC 492X1), published in 1988. After reviewing the tasks comprising the jobs identified in 1988, most of the groups could be linked to similar jobs in the current study (see Table 5).

TABLE 5

SPECIALTY JOBS COMPARISON BETWEEN CURRENT AND 1988 SURVEYS

CURRENT SURVEY (N=917)	PERCENT OF SAMPLE	1988 SURVEY (N=1,198)	PERCENT OF SAMPLE
I. MILSTAR TERMINAL OPERATOR	2	NOT IDENTIFIED	-
II. TRAINING	2	TECHNICAL SCHOOL INSTRUCTORS	1
III. SECURITY MANAGEMENT	2	NOT IDENTIFIED	-
IV. MAJCOM STAFF NCO	2	STAFF NCOs	7
V. SUPERVISOR	13	FIRST-LINE SUPERVISORS	10
VI. COMBAT CREW COMMUNICATIONS	7	COMBAT CREW COMMUNICATIONS (CCC) SPECIALISTS	13
VII. REGENCY NET RADIO OPERATOR	1	NOT IDENTIFIED	-
VIII. GLOBAL HF SYSTEMS RADIO OPERATOR	26	MYSTIC STAR (PRESIDENTIAL OR VIP) RADIO OPERATORS	2
IX. AFSATCOM TERMINAL OPERATORS	7	COMMAND AND CONTROL PERSONNEL	33
X. SPECIAL OPERATIONS RADIO OPERATOR	1	AFSATCOM TERMINAL OPERATORS	6
XI. MOBILITY/TACTICAL RADIO OPERATORS	15	NOT IDENTIFIED	-
XII. MARS OPERATOR	3	SPECIAL APPLICATIONS PERSONNEL	17
		MILITARY AFFILIATED RADIO SYSTEM (MARS)/INTER-AMERICAN	5
		TELECOMMUNICATIONS SYSTEM (SITFA)	
XIII. COMMAND, CONTROL, COMMUNICATIONS RADIO OPERATOR	1	RADIO OPERATORS/USSOUTHCOM (MRS)	-
		NOT IDENTIFIED	
XIV. TELEPHONE SWITCHBOARD OPERATOR	5	TACTICAL SWITCHBOARD OPERATORS	1
		AIR SUPPORT OPERATIONS CENTER (ASOC) SQUADRON PERSONNEL	1
NOT IDENTIFIED	-	WEATHER INTERCEPT OPERATORS	1

Nine of the 14 jobs in the current study were also identified in 1988. The five jobs that were not identified in the last survey are: Milstar Terminal Operator, Security Management, Regency Net Radio Operator, Special Operations Radio Operator, and Command, Control, Communications Radio Operator. The only job that was identified in the 1988 survey that was not identified in the current study is Weather Intercept Operator. All 6 of these jobs only make up 1 or 2 percent of the total sample for the current survey, indicating that the overall career ladder has not changed a great deal since 1988.

Summary

Fourteen jobs were identified in the career ladder structure analysis. Nine of the jobs were directly involved in performing the technical duties and tasks pertaining to the operation of various types of radio equipment. One job, Telephone Switchboard Operator, was unique because of its concentration of activities involved in telephone switchboard equipment rather than radio equipment. The remaining four jobs were characterized by staff, supervisory, or training activities.

ANALYSIS OF DAFSC GROUPS

An analysis of DAFSC groups, in conjunction with the analysis of the career ladder structure, is an important part of each occupational survey. The DAFSC analysis identifies differences in tasks performed at the various skill levels. This information may then be used to evaluate how well career ladder documents, such as AFMAN 36-2108 *Specialty Descriptions* and the Specialty Training Standard (STS), reflect what career ladder personnel are actually doing in the field.

The distribution of skill-level groups across the career ladder jobs is displayed in Table 6, while Table 7 offers another perspective by displaying the relative time spent on each duty across the skill-level groups. A typical pattern of progression is present, with personnel spending more of their relative time on duties involving supervisory, managerial, and training tasks as they move upward toward the 7- and 9-skill level. It is also obvious, though, that 7-skill level personnel are still somewhat involved with technical task performance, and the 9-skill level members are the primary managers in the career ladder.

Skill-Level Descriptions

DAFSC 3C131. The 170 airmen reporting holding the 3-skill level (representing 19 percent of the survey sample) performed an average of only 46 tasks. Performing a highly technical job, 72 percent of their relative duty time is devoted to tasks covering operation and maintenance of radio communications systems. Tasks involving general administrative functions accounted for

* Denotes less than .5 percent

- Denotes duty is not performed

another 21 percent of their time (see Table 7). As shown in Table 6, personnel in this group are well represented in six technical jobs, with the largest numbers in the Global HF Radio Operator (32 percent), MARS Radio Operator (13 percent), and Telephone Switchboard Operator (12 percent) Jobs. Table 8 displays representative tasks performed by the highest percentages of these airmen. A review of all the tasks performed by group members revealed that only 3 tasks are performed by 50 percent or more of this group. This low number of common tasks performed by these airmen indicates extremely diverse jobs being performed at this level.

DAFSC 3C151. Five-skill level personnel (62 percent of the survey sample) perform many of the same tasks as DAFSC 3C131 personnel. The scope of the job performed by these airmen is somewhat greater than that of the 3-skill level group (77 tasks versus an average of only 46 tasks, respectively). Five-skill level personnel are represented in all 14 of the specialty jobs, but they are best represented in the Global HF Radio Operator (30 percent) and Mobility/Tactical Radio Operator (18 percent) jobs (see Table 6). Fifty-four percent of their relative time is spent on duties directly involved in the technical aspects of operating and maintaining radio communications equipment, while 45 percent of their relative time is spent on administrative and supervisory-related tasks. Table 9 displays selected representative tasks performed by the highest percentages of these airmen. Table 10 displays those tasks which reflect differences between the 3- and 5-skill level groups. This table reveals that 5-skill level members are doing all the tasks that 3-skill level members are performing, but they are doing additional tasks that 3-skill level personnel are not performing. Career ladder diversity is also a factor for 5-skill level personnel, since only 10 tasks are performed by 50 percent or more of these airmen.

DAFSC 3C171. Representing 19 percent of the survey sample, these NCOs perform an average of 87 tasks. With only 22 percent of their relative time devoted to technical duties, 7-skill level personnel are involved more in the upper-level managerial, supervisory, and training duties. According to Table 6, 40 percent of 7-skill level personnel are in the Supervisor Job. Thirteen percent fall into the Mobility/Tactical Radio Operator Job. Table 11 reflects commonly performed tasks. Nearly all of the tasks listed are supervisory or administrative in nature. Table 12 lists the tasks that show the major differences between 7-skill and 5-skill level groups. The managerial role that 7-skill level personnel perform is the main distinguishing feature between them and the 5-skill level members. The career ladder diversity noted in the 3- and 5-skill level jobs is also a factor for 7-skill level members, with only 21 tasks being performed by 50 percent or more of the group.

DAFSC 3C191. As is typical in most career ladders, personnel in the 9-skill level DAFSC reported performing primarily nontechnical tasks. The 9 members of this group performed an average of 73 tasks. Only 7 percent of their relative job time was spent on technical duties. The remainder was spent on supervisory and training functions and managerial administrative-type tasks. Table 13 displays representative tasks for the group, while Table 14 presents tasks which

TASKS		PERCENT MEMBERS PERFORMING (N=172)
A25	Participate in general meetings, such as staff meetings, briefings, conferences, and workshops, other than conducting	85
A6	Determine or establish work priorities	67
B44	Counsel personnel on personal or military-related matters	66
E159	Destroy classified materials	65
C108	Write EPRs	65
E174	Initiate electronic mail (E-mail)	64
C75	Conduct performance feedback worksheet (PFW) evaluation sessions	60
A31	Plan or prepare briefings	60
A19	Establish organizational policies, such as operating instructions (OIs) or standard operating procedures (SOPs)	59
C110	Write recommendations for awards or decorations	58
A20	Establish performance standards for subordinates	56
A32	Plan or schedule work assignments or priorities	56
E160	Document destruction of classified materials	55
A22	Establish work methods or procedures	55
E180	Maintain administrative files	55
E182	Maintain classified materials	55
C94	Evaluate personnel for compliance with performance standards	53
A4	Determine or establish logistics requirements, such as personnel, equipment, space, tools, or supplies	52
A38	Review drafts of regulations, manuals, or other directives	52
B43	Conduct supervisory orientations of newly assigned personnel	51
A17	Establish administrative files	50
A23	Establish work schedules	49
E176	Inventory classified materials	49
A39	Schedule personnel for temporary duty (TDY) assignments, leaves, or passes	49
A40	Write job or position descriptions	49
C77	Conduct self-inspections	48
A5	Determine or establish publications requirements	48
E151	Change safe or lock combinations	47
E152	Compile information for records, reports, or logs	47
C95	Evaluate personnel for promotion, demotion, reclassification, or special awards	45
C104	Inspect personnel for compliance with military standards	45
A1	Assign personnel to duty positions, other than mobility positions	44
A14	Draft budget requirements	44
B64	Interpret policies, directives, or procedures for subordinates	44
C81	Evaluate communications operations	42
B69	Supervise Radio Communications Systems Journeyman (AFSC 3C151)	42

reflect differences between these more senior NCOs and 7-skill level personnel. Table 6 shows that the primary job for 9-skill level members is Supervisor (44 percent), while MAJCOM Staff NCO and Mobility/Tactical Radio Operator both hold 11 percent of the group.

Summary

Distinctions between skill-level groups are evident, with personnel at the 3- and 5-skill levels spending the vast majority of their job time performing technical tasks across a number of different jobs. At the 7-skill level, the shift towards supervisory tasks becomes quite clear. Nine-skill level members are basically managers and supervisors performing higher-level and nontechnical tasks. The low number of tasks performed by 50 percent or more of the 3-, 5-, and 7-skill level groups suggest these personnel are performing diverse jobs.

ANALYSIS OF AFMAN 36-2108 *SPECIALTY DESCRIPTION*

Survey data were compared to the AFMAN 36-2108 *Specialty Description* for Radio Communications Systems, dated 31 October 1994.

In general, the specialty description encompasses most of the AFSC 3C1X1 career ladder jobs identified. It discusses not only the technical aspect of the jobs, but also includes higher-level duties, such as reviewing and evaluating radio operations. It does not, however, mention any of the tasks typical of the Telephone Switchboard Operator Job.

TRAINING ANALYSIS

Occupational survey data represent one of the many sources of information which are used to assist in the development training programs for career ladder personnel. OSR data useful to training personnel include job descriptions for the various jobs performed within a career ladder, distributions of personnel across career ladder jobs, percentages of personnel performing specific tasks, percentages of personnel maintaining specific equipment or systems, as well as the difficulty of tasks and TE ratings gathered from senior members of the career ladder.

First-Enlistment Personnel

In this study, there are 195 members in their first enlistment (1-48 months TAFMS), representing 21 percent of the total survey sample. The jobs performed by these personnel are highly technical in nature. First enlistment personnel, according to Table 15, spend the majority

TABLE 15

N PERFORMING MOBILITY AND SUPPORT ACTIVITIES	2

of their relative time performing administrative duties, operating radio equipment, and setting up radio equipment. Distribution of these personnel across the career ladder jobs is displayed in Figure 2. Table 16 displays some of the average 41 tasks performed by the group, and, by virtue of the relatively low percentages performing any given task (only 3 tasks are performed by 50 percent or more of the group), also reflects the somewhat diverse nature of the jobs being performed at this level.

One of the objectives of this survey was to gather data for the technical school pertaining to various types of radio communications equipment used or maintained. Accordingly, Table 17 presents percentages of first-enlistment airmen responding to questions concerning their activities involving these items. This type of information is useful for both technical school and MAJCOM training personnel to assist them in focusing limited training time or other resources on the most utilized items.

Training Emphasis (TE) and Task Difficulty (TD) Data

TE and TD data are secondary factors that can assist technical school personnel in deciding which tasks should be emphasized in entry-level training. These ratings, based on the judgments of senior career ladder NCOs working at operational units in the field, are collected to provide training personnel with a rank-ordering of those tasks in the JI considered important for first-enlistment personnel training (TE) (see Table 18 for the top-rated tasks), along with a measure of the difficulty of the JI tasks (TD) (see selected high rated tasks presented in Table 19). When combined with data on the percentages of first-enlistment personnel performing tasks, comparisons can then be made to determine if training adjustments are necessary. For example, tasks receiving high ratings on both task factors, accompanied by moderate to high percentages performing, may warrant resident training. Those tasks receiving high task factor ratings, but low percentages performing, may be more appropriately planned for OJT programs within the career ladder. Low task factor ratings may highlight tasks best omitted from training for first-enlistment personnel, but this decision must be weighed against percentages of personnel performing the tasks, command concerns, and criticality of the tasks.

The results of the TE and TD analysis reveal certain trends. Seven of the eight tasks rated highest in Training Emphasis are categorized under Duty I, Operating and Maintaining Radio Equipment. Several tasks in Duty E, Performing General Administrative and Supply Activities, were also rated fairly high. Of those tasks rated highest in task difficulty, all but one task are categorized under Duties A through D. These duties are nontechnical in nature and tend to focus around managerial and supervisory-type tasks. The percent members performing these tasks is highest among those at the 7-skill level. The majority of these tasks were also rated low in training emphasis.

To assist technical school personnel, AFOMS has developed a computer program that incorporates these secondary factors and the percentage of first-enlistment personnel performing each task to produce an Automated Training Indicator (ATI) for each task. These indicators

correspond to training decisions listed and defined in the Training Decision Logic Table found in Attachment 1, AETCR 52-22, and allow course personnel to quickly focus their attention on those tasks which are most likely to qualify for initial resident course consideration.

Various lists of tasks, accompanied by TE and TD ratings, and where appropriate, ATI information, are contained in the TRAINING EXTRACT package and should be reviewed in detail by technical school personnel. (For a more detailed explanation of TE and TD ratings, see Task Factor Administration in the **SURVEY METHODOLOGY** section of this report.)

Specialty Training Standard (STS)

A comprehensive review of STS 3C1X1, dated April 1994, was made by comparing survey data to STS elements. Technical school personnel from Keesler AFB MS matched JI tasks to appropriate STS sections and subsections. A complete computer listing displaying the percent members performing tasks, TE and TD ratings for each task, along with the STS matchings, has been forwarded to the technical school for their review of the training documents. A complete computer listing for equipment items and forms has also been forwarded to the school.

Typically, STS sections and subsections matched to tasks which have sufficiently high TE and TD ratings, and are performed by at least 20 percent of personnel in appropriate experience or skill-level groups (such as first-enlistment (1-48 months TAFMS) and 5- and 7-skill level groups), are considered to be supported and should be considered for inclusion in the STS. Likewise, paragraphs having tasks with less than 20 percent performing across all the criterion groups should be considered for deletion from the STS.

General STS paragraphs, such as Career Progression, Supervision, and Training (paragraphs 1-3) were not reviewed. Paragraphs 4 through 11 were thoroughly reviewed against the OSR data. Most were, in general, supported, in that tasks matched to the STS paragraphs generally had at least 20 percent of one criterion group performing the matched tasks. However, SMEs should carefully review the STS for possible fine-tuning of content and proficiency codes, in light of the fact that this is a very diverse career ladder and personnel work on many different systems and pieces of equipment (both fixed and mobile). Equipment data presented earlier should be helpful in any review performed.

Table 20 lists several examples of STS paragraphs which need to be reviewed by SMEs. For example, paragraphs 7d(10), 7g(2)(b), 7g(3), 8b(2)(b), 8b(3)(d), and 11a(1) need to be reviewed for deletion in future revisions due to small percentages (less than 20 percent) performing related tasks. Several of the proficiency codes should also be carefully reviewed. For example, in paragraph 11a(1), only 2 percent of first-enlistment personnel are performing related tasks, yet the course is taught at the "2b" level. Similar situations arise with paragraphs 7d(10) and 7g(3).

TABLE 20

EXAMPLES OF STS ELEMENTS NOT SUPPORTED BY OSR DATA
(LESS THAN 20 PERCENT MEMBERS PERFORMING)

STS REFERENCE/TASKS	3-LEVEL COURSE PROF CODE	TNG EMPH	PERCENT MEMBERS PERFORMING				TASK DIFF
			1ST JOB (N=106)	1ST ENL (N=195)	5-SKILL LEVEL (N=566)	7-SKILL LEVEL (N=172)	
7d(10) LOGKEEPING	2b						
E194 Make entries on frequency utilization letters		1.85	5	4	3	3	3.85
8b(2)(b) DEPLOYABLE	B						
F294 Set up VHF whip antennas		3.20	1	4	7	6	4.43
F297 Set up VHF/UHF portable satellite dish antennas		2.63	0	1	6	4	5.43
8b(3)(d) SATELLITE ANTENNA	b						
F297 Set up VHF/UHF portable satellite dish antennas		2.63	0	1	6	4	5.43
11a(1) SELECT EQUIPMENT	2b						
G341 Configure transceivers for switchboard dial code operations		2.85	3	2	2	3	5.30
7g(2)(b) PERFORM COUNTERMEASURES	a						
I386 Implement spectrum interference countermeasures		4.61	3	5	8	12	5.54
7g(3) CIRVIS REPORTS	2b						
I405 Receive, transmit, or relay communications instructions for reporting vital intelligence sightings (CIRVISs) reports		4.12	9	9	11	4	5.67

Average TE = 2.39, Standard Deviation = 1.44, High TE = 3.83

Average TD = 5.00, Standard Deviation = 1.00, High TD = 6.00

Tasks not matched to any element of the STS are listed at the end of the STS computer listing. Table 21 lists examples of tasks which were performed by 20 percent or more of criterion groups, but not matched to any STS item. Training personnel and SMEs should review these and other unreferenced tasks to determine their appropriateness in being included in the STS.

Plan of Instruction (POI)

POI E3ABR3C131, Radio Communications Systems Apprentice, dated 21 August 1995, was reviewed against the extensive equipment lists presented above, the tasks performed by first-job and first-enlistment personnel, TE and TD ratings, and the job structure described in the **SPECIALTY JOBS** section of the OSR. POI criterion objectives were compared against the standard set forth in Attachment 1, AETCR 52-22, dated February 1989 (30 percent or more of the criterion first-enlistment group performing tasks or using equipment trained, along with sufficiently high TE and TD ratings). Per this guidance, behavioral objectives in the course which do not meet these criteria should be considered for elimination from the formal course if not justified on some other acceptable basis.

Table 22 lists selected examples of POI elements which require review by SMEs because they are not performed by 30 percent of DAFSC 3C1X1 first-job or first-enlistment personnel. Tasks related to paragraphs II 6c and III 2g, for example, are performed by less than 10 percent of first-enlistment personnel. Such paragraphs should be recommended for revision or deletion.

ANALYSIS OF MAJOR COMMANDS (MAJCOM)

Tasks and background data of the nine MAJCOMs or field operating agencies with the largest AFSC 3C1X1 populations were compared to determine whether job content varied as a function of command assignment (see Table 23).

Generally, all MAJCOMs showed high relative time spent in general administrative and supply activities, except for CENTCOM, which reflected high percentages in setting up radio equipment and performing mobility and support activities. As would be expected, AETC showed a high percentage of time spent performing training duties. AFSPACECOM rated high in the performance of SATCOM activities, and both AFSPACECOM and AMC had the highest numbers under the operation of telephone switchboards. Other notable differences include AFSOC, which rated high in setting up radio equipment, and both PACAF and AFMC, which rated high in operating radio equipment.

JOB SATISFACTION ANALYSIS

An examination of the job satisfaction indicators of various groups can give career ladder managers a better understanding of some of the factors which may affect the job performance of airmen in the career ladder. Questions covering job interest, perceived utilization of talents and training, sense of accomplishment from work, and reenlistment intentions were included in the survey booklet to provide indications of job satisfaction.

Table 24 presents job satisfaction data for AFSC 3C1X1 TAFMS groups, together with TAFMS data for a comparative sample of Support career ladders surveyed in 1994. Less than 60 percent of all 3 TAFMS groups find their jobs interesting and are satisfied with the sense of accomplishment gained from the job. DAFSC 3C1X1 personnel rate their job satisfaction consistently lower than the 1994 comparative sample.

An indication of how job satisfaction perceptions have changed over time is provided in Table 25, where again TAFMS data for 1995 survey respondents are presented, along with data from respondents to the last OSR involving this career ladder in 1988. In every case, the number of personnel satisfied with aspects of their job went down, except for 1--those with 97 or more months time in service reported a higher perceived utilization of training than in 1988. The most notable drops in job satisfaction were the sense of accomplishment gained from work reported by first-enlistment personnel, as well as job interest as expressed by second-enlistment personnel.

In Table 26, review of the job satisfaction data for personnel in the specialty jobs identified in this survey reveals that the job people in this career ladder are performing has an impact on how they perceive their level of satisfaction. The specialty jobs rated highest in job satisfaction are Training, Special Operations Squadron Radio Operator, and MAJCOM Staff NCO. Those that reported low job satisfaction ratings were Regency Net Radio Operator, Telephone Switchboard Operator, and Command, Control, and Communications Radio Operator.

IMPLICATIONS

From the standpoint of the data gathered during the occupational survey, the AFSC 3C1X1 career ladder structure reflects a wide diversity and variety of jobs performed by career ladder members. Members primarily serve as radio operators across a broad spectrum of jobs, ranging from Milstar, Combat Crew Communications, Regency Net, Global HF Systems, and AFSATCOM activities to Special Operations Squadron, MARS, and Command, Control, Communications Radio Operators. Others work as Mobility and Tactical Radio Operators. A small group were also found to perform as Telephone Switchboard Operators rather than radio operators. Other members worked as Supervisors or in Training and Security Management jobs. Despite the diversity of work found in the career ladder, job progression shows a distinct pattern as one moves from the 3-skill level to the 9-skill level. The AFMAN 36-2108 *Specialty*

Description broadly describes all jobs performed except that of the Telephone Switchboard Operators. A thorough review of the STS and POI found that both documents are generally supported, but several areas and proficiency codes need to be reviewed. The major area of concern noted in analysis of the survey data was in job satisfaction, where extremely low percentages of AFSC 3C1X1 personnel across all TAFMS groups found their job interesting.

J419 Identify cryptographic equipment malfunctions	57
J430 Identify terminal malfunctions	57
C94 Evaluate personnel for compliance with performance standards	43
C104 Inspect personnel for compliance with military standards	43
C108 Write EPRs	43
E179 Maintain accountability records for classified materials or documents	43
E190 Maintain security forms for safes, containers, or rooms	43
E224 Update equipment status reports, such as files, logs, or boards	43
F256 Select antennas using patch panels	43
G323 Configure consoles or terminals for phone patch operations	43
J417 Identify computer equipment malfunctions	43
J431 Identify transceiver malfunctions	43
J432 Identify transmitter malfunctions	43

TABLE A8

GLOBAL HF RADIO OPERATOR
(ST073, N=236)

<u>TASKS</u>	<u>PERCENT MEMBERS PERFORMING</u>
I393 Perform radio checks	91
E159 Destroy classified materials	86
I406 Receive, transmit, or relay emergency action messages (EAMs)	86
I368 Authenticate message traffic using transmission authentication systems	85
I395 Perform time hacks	82
I408 Receive, transmit, or relay foxtrot broadcasts	82
I369 Authenticate stations using challenge-and-reply systems	81
E219 Set station clocks	78
E176 Inventory classified materials	76
F253 Rotate antennas using radio dial codes	75
E160 Document destruction of classified materials	74
G323 Configure consoles or terminals for phone patch operations	73
H351 Change recording tapes	73
I372 Conduct phone patches manually	73
I384 Identify incoming calls using call-sign lists	73
J418 Identify console malfunctions	72
E169 Extract call-signs	67
E184 Maintain master station logs	67
G328 Configure equipment for simplex operations	65
G327 Configure equipment for duplex operations	64
I400 Receive and relay aircraft emergencies	64
E200 Post call-sign lists	62
I399 Prepare messages using HF voice format	61
H361 Perform operational checks of radio systems	60
J426 Identify receiver malfunctions	60
J427 Identify recording equipment malfunctions	58
E229 Verify accuracy of call-sign lists	57
F242 Key secure cryptographic systems	57
I414 Verify alert participants	56

TABLE A9
AFSATCOM TERMINAL OPERATOR
(ST095, N=66)

<u>TASKS</u>	<u>PERCENT MEMBERS PERFORMING</u>
E159 Destroy classified materials	94
E176 Inventory classified materials	94
L462 Configure consoles or terminals for secure or nonsecure voice or data communications	94
L483 Operate status display units (SDUs)	91
I412 Reset EAM alarms	89
L468 Configure SATCOM systems for time division multiplex (TDM) mode I operations	85
L478 Initiate or terminate satellite commands	85
I406 Receive, transmit, or relay emergency action messages (EAMs)	83
L471 Enter SATCOM messages into storage	83
L479 Load SATCOM command post synchronizers	83
E184 Maintain master station logs	82
L466 Configure SATCOM systems for random operations	82
L490 Transmit SATCOM messages	82
H349 Change paper in high speed printers	80
E160 Document destruction of classified materials	79
E219 Set station clocks	79
L477 Initiate communications supervisory commands	77
L461 Assume satellite communications (SATCOM) net controls and brief stations assuming net controls	73
E151 Change safe or lock combinations	71
E229 Verify accuracy of call-sign lists	71
I368 Authenticate message traffic using transmission authentication systems	71
I384 Identify incoming calls using call-sign lists	71
I396 Prepare messages using AFSATCOM format	71
L469 Configure SATCOM systems for TDM mode II operations	71
E169 Extract call-signs	70
J430 Identify terminal malfunctions	70

TABLE A10

SPECIAL OPERATIONS SQUADRON RADIO OPERATOR
(ST100, N=9)

<u>TASKS</u>		<u>PERCENT MEMBERS PERFORMING</u>
E159	Destroy classified materials	100
I393	Perform radio checks	100
E176	Inventory classified materials	89
I400	Receive and relay aircraft emergencies	89
I407	Receive, transmit, or relay facsimile messages	89
E160	Document destruction of classified materials	78
E182	Maintain classified materials	78
E184	Maintain master station logs	78
F232	Connect or disconnect antennas to radio equipment	78
F242	Key secure cryptographic systems	78
I401	Receive and relay departure reports	78
A25	Participate in general meetings, such as staff meetings, briefings, conferences, and workshops, other than conducting	67
E152	Compile information for records, reports, or logs	67
F243	Load or unload radio equipment	67
G340	Configure transceivers for secure voice operations	67
I403	Receive and relay position reports	67
N531	Maintain personal mobility bags	67
E190	Maintain security forms for safes, containers, or rooms	56
E224	Update equipment status reports, such as files, logs, or boards	56
F248	Pack or unpack pallets	56
G329	Configure facsimile equipment	56
I402	Receive and relay execution checklist messages	56
I409	Receive, transmit, or relay service messages, such as notice-to-airmen (NOTAM) or pilot reports (PIREPS)	56
I410	Receive, transmit, or relay special weather broadcast messages	56
N533	Pack mobility equipment for shipment or movement	56
E169	Extract call-signs	44
H361	Perform operational checks of radio systems	44
N544	Store classified materials at deployed locations	44

TABLE A11

MOBILITY/TACTICAL RADIO OPERATOR
(ST080, N=140)

<u>TASKS</u>		<u>PERCENT MEMBERS PERFORMING</u>
F232	Connect or disconnect antennas to radio equipment	98
F231	Connect or disconnect antenna couplers	95
F262	Set up antenna masts	95
F243	Load or unload radio equipment	90
H347	Adjust antenna guy lines or ropes	89
I393	Perform radio checks	89
F233	Connect or disconnect auxiliary mobile field generators	88
F244	Orient high frequency (HF) tactical antennas	86
F278	Set up HF whip antennas	86
F236	Connect or disconnect cryptographic equipment	84
N531	Maintain personal mobility bags	82
F268	Set up HF dipole antennas	80
F248	Pack or unpack pallets	79
H361	Perform operational checks of radio systems	79
F242	Key secure cryptographic systems	76
N533	Pack mobility equipment for shipment or movement	76
E159	Destroy classified materials	75
F298	Site radio antennas	74
N517	Camouflage equipment or personnel	74
F303	Tune transceivers to obtain readable signals	72
N523	Erect or dismantle tents or shelters	72
A25	Participate in general meetings, such as staff meetings, briefings, conferences, and workshops, other than conducting	71
F252	Reconfigure antennas	71
F282	Set up mobile or transportable HF/single sideband (SSB)	71
F299	Site radio equipment	71
E176	Inventory classified materials	70
I369	Authenticate stations using challenge-and-reply systems	70
E184	Maintain master station logs	69
F241	Install grounding systems	69

TABLE A12

MARS RADIO OPERATOR
(ST070, N=31)

<u>TASKS</u>		<u>PERCENT MEMBERS PERFORMING</u>
I393	Perform radio checks	97
I370	Check stations into or out of the net	90
I371	Conduct net roll calls	87
E184	Maintain master station logs	81
I372	Conduct phone patches manually	81
I388	List traffic with net control stations	81
E219	Set station clocks	71
I379	Direct users to tune to your count	71
I399	Prepare messages using HF voice format	71
E187	Maintain position logs	68
I390	Notify stations of frequency changes	68
I389	Monitor frequency standards of stations on net	61
F303	Tune transceivers to obtain readable signals	55
G315	Change transceiver frequencies manually	55
I395	Perform time hacks	55
I377	Determine operating frequencies	45
E153	Conduct traffic analyses	42
G323	Configure consoles or terminals for phone patch operations	42
E159	Destroy classified materials	39
H361	Perform operational checks of radio systems	39
E152	Compile information for records, reports, or logs	35
E174	Initiate electronic mail (E-mail)	35
G312	Change receiver frequencies manually	35
A25	Participate in general meetings, such as staff meetings, briefings, conferences, and workshops, other than conducting	32
E160	Document destruction of classified materials	32
E176	Inventory classified materials	32
E180	Maintain administrative files	32
E185	Maintain military affiliate radio system (MARS)	32
G337	Configure transceivers for clear voice operations	32
E197	Monitor frequencies for interference among users	29

MEMBERS
PERFORMING

TASKS

F232	Connect or disconnect antennas to radio equipment	100
F231	Connect or disconnect antenna couplers	80
F262	Set up antenna masts	80
F268	Set up HF dipole antennas	80
F271	Set up HF inverted V antennas	80
F273	Set up HF long wire antennas, other than sloping long wire	80
F277	Set up HF sloping V antennas	80
E159	Destroy classified materials	60
E187	Maintain position logs	60
F233	Connect or disconnect auxiliary mobile field generators	60
F242	Key secure cryptographic systems	60
F243	Load or unload radio equipment	60
F270	Set up HF inverted L antennas	60
F303	Tune transceivers to obtain readable signals	60
I406	Receive, transmit, or relay emergency action messages (EAMs)	60
E160	Document destruction of classified materials	40
F275	Set up HF near vertical incidents skywave (NVIS) antennas	40
F278	Set up HF whip antennas	40
H347	Adjust antenna guy lines or ropes	40
I393	Perform radio checks	40
E199	Post access lists	20
F244	Orient high frequency (HF) tactical antennas	20
F276	Set up HF sloping long wire antennas	20
F288	Set up radio equipment for remote operations	20
F302	Tune receivers to obtain readable signals	20
F304	Tune transceivers to produce readable signals	20
G311	Change receiver frequencies by remote control	20
H357	Inspect communications equipment cables or cable connections	20
I368	Authenticate message traffic using transmission authentication systems	20
I399	Prepare messages using HF voice format	20

TABLE A14

TELEPHONE SWITCHBOARD OPERATOR
(ST052, N=49)

<u>TASKS</u>	<u>PERCENT MEMBERS PERFORMING</u>
M492 Accept and connect calls	100
M506 Place calls	98
M510 Set up telephone conference calls	96
M498 Initiate high-precedence calls	84
M497 Coordinate switchboard circuit or equipment problems with maintenance, technical control, or support agencies	82
M504 Maintain telephone directories	82
M509 Reroute calls	73
M503 Maintain switchboard instructions for emergencies, such as fire, crash, or attack	69
M505 Monitor high-precedence or emergency calls	69
M496 Compile telephone directories	65
M513 Test switchboard circuits	63
E184 Maintain master station logs	61
M493 Answer supervisory lights	55
M511 Supervise minimize condition actions	51
D118 Conduct OJT	47
M501 Maintain master telephone information files for information services	47
M494 Book calls	41
E174 Initiate electronic mail (E-mail)	40
A25 Participate in general meetings, such as staff meetings, briefings, conferences, and workshops, other than conducting	39
C108 Write EPRs	35
M502 Maintain precedence call control number logs	33
C75 Conduct performance feedback worksheet (PFW) evaluation sessions	31
M495 Compile information for switchboard traffic routing diagrams	29
M508 Provide call progress information	29
E163 Draft or write outage reports	27
M507 Prepare toll tickets	20
